- M. Hausberger 2007-08-20

Horse behaviour and welfare is a major issue as horses are mainly sport and recreational animals where the human-animal relation is essential. Scientific studies on this topic have increased greatly over the last decade and this publication enlightens some of the major issues raised such as horse temperament, early experience, horning and social management and equine behaviour welfare. Precise studies are described here, that are placed in the more general context of the international scientific advances. Important behavioural aspects concern: how to measure temperament

traits and the genetic/experimental influences on temperament, when, how and whether to handle foals in order to improve human/foal relation, the importance of the social environment on the behaviour of young and adult horses. On the other hand, the improvement of equine welfare through better practices is described such as housing design, feeding practices or social grouping. The use of behavioural cues in order to assess welfare is discussed and tested through experimental approaches. This book constitutes a very rich overview of the recent and new research lines in the field of horse behaviour and welfare.
