Modernist Cuisine - Nathan Myhrvold 2011-12-15

Técnicas rompedoras utilizadas por los mejores chefs del mundo "El libro más importante en las artes culinarias desde Escoffier." --Tim Zagat Una revolución está en marcha en el arte de la cocina. Al igual que el impresionismo francés rompió con siglos de tradición artística, en los últimos años la cocina modernista ha franqueado los límites de las artes culinarias. Tomando prestadas técnicas de laboratorio, los chefs de santuarios gastronómicos mundialmente reconocidos, como elBulli, The Fat Duck, Alinea y wd~50, han abierto sus cocinas a la ciencia y a la innovación tecnológica incorporando estos campos de conocimiento al genio creativo de la elaboración de alimentos. En Modernist Cuisine: El arte y la ciencia de la cocina, Nathan Myhrvold, Chris Young y Maxime Bilet --científicos, creadores y reconocidos cocineros-- revelan a lo largo de estos seis volúmenes, de 2.440 páginas en total, unas técnicas culinarias que se inspiran en la ciencia y van de lo insospechado a lo sublime. Las 20 personas que componen el equipo de The Cooking Lab han conseguido nuevos y asombrosos sabores y texturas con utensilios como el baño María, los homogeneizadores y las centrífugas e ingredientes como los hidrocoloides, los emulsionantes y las enzimas. Modernist Cuisine es una obra destinada a reinventar la cocina. ¿Cómo se hace una tortilla ligera y tierna por fuera pero sabrosa y cremosa por dentro? ¿O patatas fritas esponjosas por dentro y crujientes por fuera? Imagínese poder envolver un mejillón con una esfera de gelatina de su propio jugo, dulce y salado a la vez. O preparar una mantequilla solo a base de pistachos, fina y homogénea. Modernist Cuisine explica

todas estas técnicas y le guía paso a paso con ilustraciones. La ciencia y la tecnología de la gastronomía cobran vida en miles de fotografías y diagramas originales. Las técnicas fotográficas más novedosas e impresionantes permiten al lector introducirse en los alimentos para ver toda la cocina en acción, desde las fibras microscópicas de un trozo de carne hasta la sección transversal de una barbacoa Weber. La experiencia de comer y cocinar bajo una perspectiva completamente nueva. Una muestra de lo que va a descubrir: Por qué sumergir los alimentos en agua helada no detiene el proceso de cocción Cuando cocer en agua es más rápido que al vapor Por qué subir la parrilla no reduce el calor Por qué el horneado es principalmente un proceso de secado Por qué los alimentos fritos se doran mejor y saben más si el aceite se ha utilizado previamente Cómo pueden las modernas técnicas de cocina conseguir resultados perfectos sin el tiempo exacto o la buena suerte que requieren los métodos tradicionales Incluye aspectos cruciales como: Los sorprendentes principios científicos que encierran los métodos tradicionales de preparación de los alimentos, como asar, ahumar y saltear La guía más completa publicada hasta la fecha sobre la cocina al vacío, con las mejores opciones para baños María, materiales de envasado y equipos de sellado, estrategias de cocción y consejos para solucionar problemas Más de 250 páginas sobre carnes, pescados y marisco y 130 páginas sobre frutas, verduras y cereales, incluidas cientos de recetas paramétricas y técnicas paso a paso Extensos capítulos que explican cómo obtener conseguir resultados increíbles utilizando modernos espesantes, geles, emulsiones y espumas, incluidas recetas de muestra y muchas fórmulas Más de 300 páginas de nuevas recetas con presentaciones listas para servirse en restaurantes de alta cocina, además de recetas adaptadas de grandes chefs como Grant Achatz, Ferran Adrià, Heston Blumenthal, David Chang, Wylie Dufresne y David Kinch, entre otros Volumen 1: Historia y fundamentos Volumen 2: Técnicas y equipamiento Volumen 3: Animales y plantas Volumen 4: Ingredientes y preparaciones Volumen 5: Recetas listas para servir Volumen 6: Manual de cocina, impreso en papel resistente al agua, con recetas de ejemplo y exhaustivas tablas de referencia

And here is the book that, for forty years, has been teaching Americans how. *Mastering the Art of French Cooking* is for both seasoned cooks and beginners who love good food and long to reproduce at home the savory delights of the classic cuisine, from the historic Gallic masterpieces to the seemingly artless perfection of a dish of spring-green peas. This beautiful book, with more than one hundred instructive illustrations, is revolutionary in its approach because: It leads the cook infallibly from the buying and handling of raw ingredients, through each essential step of a recipe, to the final creation of a delicate confection. Human Dimension and Interior Space - Julius Panero 2014-01-21

The study of human body measurements on a comparative basis is known as anthropometrics. Its applicability to the design process is seen in the physical fit, or interface, between the human body and the various components of interior space. Human Dimension and Interior Space is the first major anthropometrically based reference book of design standards for use by all those involved with the physical planning and detailing of interiors, including interior designers, architects, furniture designers, builders, industrial designers, and students of design. The use of anthropometric data, although no substitute for good design or sound professional judgment should be viewed as one of the many tools required in the design process. This comprehensive overview of anthropometrics consists of three parts. The first part deals with the theory and application of anthropometrics and includes a special section dealing with physically disabled and elderly people. It provides the designer with the fundamentals of anthropometrics and a basic understanding of how interior design standards are established. The second part contains easy-to-read, illustrated anthropometric tables, which provide the most current data available on human body size, organized by age and percentile groupings. Also included is data relative to the range of joint motion and body sizes of children. The third part contains hundreds of dimensioned drawings, illustrating in plan and section the proper anthropometrically based relationship between user and space. The types of spaces range from residential and commercial to recreational and institutional, and all dimensions include metric conversions. In the Epilogue, the authors challenge the interior design profession, the building industry, and the furniture manufacturer to seriously explore the problem of adjustability in design. They expose the fallacy of designing to accommodate the so-called average man, who, in fact, does not exist. Using government data, including studies prepared by Dr. Howard Stoudt, Dr. Albert Damon, and Dr. Ross McFarland, formerly of the Harvard School of Public Health, and Jean Roberts of the U.S. Public Health Service, Panero and Zelnik have devised a system of interior design reference standards, easily understood through a series of charts and situation drawings. With Human Dimension and Interior Space, these standards are now accessible to all designers of interior environments.
