**Judgment and Decision-Making** - Nancy S. Kim 2017-10-19

How do we make the judgments that inform our lives? Is there any way of consciously removing bias from the choices we make? What do our everyday personal decisions have in common with those made by groups, companies, and even nations? In this engaging and innovative textbook, Nancy Kim presents a multidisciplinary introduction to the dynamic field of judgment and decision-making. This lucidly written text delivers insights from cognitive psychology, aptly combining with interdependent findings from fields as diverse as neuropsychology, behavioural economics, social, developmental and clinical psychology, and philosophy. Offering not only a comprehensive explanation of the neurological structures and cognitive processes that underlie how we make decisions and form judgments in our everyday lives, readers can expect to learn the implications of these decisions upon an individual's prospects for health and longevity. Understanding behaviour is a central aspect of inquiry in the psychology discipline and as such this book is an essential companion for students taking undergraduate psychology, cognitive psychology and cognitive neuroscience courses; particularly those which include a module in judgment and decision-making. *Psychological Testing in the Service of Disability Determination* - Institute of Medicine 2015-06-29

The United States Social Security Administration (SSA) administers two disability programs: Social Security Disability Insurance (SSDI), for disabled individuals, and their dependent family members, who have worked and contributed to the Social Security trust funds, and Supplemental Security Income (SSSI), which is a means-tested program based on income and financial assets for adults aged 65 years or older and disabled adults and children. Both programs require that claimants have a disability and meet specific medical criteria in order to qualify for benefits. SSA establishes the presence of a medically-determined impairment in individuals with mental disorders other than intellectual disability through the use of standard diagnostic criteria, which include symptoms and signs. These impairments are established largely on reports of signs and symptoms of impairment and functional limitation. Psychological Testing in the Service of Disability Determination considers the use of psychological tests in evaluating disability claims

submitted to the SSA. This report critically reviews selected psychological tests, including symptom validity tests, that could contribute to SSA disability determinations. The report discusses the possible uses of such tests and their contribution to disability determinations. Psychological Testing in the Service of Disability Determination discusses testing norms, qualifications for administration of tests, administration of tests, and reporting results. The recommendations of this report will help SSA improve the consistency and accuracy of disability determination in certain cases.

**Detection of Malingering during Head Injury Litigation** - Cecil R. Reynolds 2012-03-21

Increased public awareness of traumatic brain injuries has fueled a number of significant developments: on the one hand, more funding and more research related to these injuries and their resulting deficits; on the other, the possibility of higher stakes in personal injury suits—and more reasons for individuals to feign injury. Expanding both the conceptual and clinical knowledge base on the subject, the Second Edition of Detection of Malingering during Head Injury Litigation offers the latest detection tools and techniques for veteran and novice alike. As in its initial incarnation, this practical revision demonstrates how to combine clinical expertise, carefully-gathered data, and the use of actuarial models as well as common sense in making sound evaluations and reducing ambiguous results. And, the book navigates the reader through the many caveats that come with the job, beginning with the scenario that an individual may be malingering despite having an actual brain injury. Among the updated features: •Specific chapters on malingering on the Halstead-Reitan, Luria-Nebraska, and MMPI-2. •A framework for distinguishing genuine from factitious PTSD in head injury cases. •Detailed information regarding performance on the WMT, MSVT, and NV-MSVT by children with developmental disabilities. •Guidelines for explaining symptom validity testing to the trier of fact. •Entirely new chapters on mild TBI and on malingering of PTSD symptoms in the context of TBI litigation. Professional neuropsychologists and forensic psychologists will appreciate this new edition of

Detection of Malingering during Head Injury Litigation as an invaluable source of refinements to their craft, and improvement as an expert witness.

**Interplanetary Outpost** - Erik Seedhouse 2012-02-02

"Interplanetary Outpost" follows the mission architecture template of NASA's plan for Human Outer Planet Exploration (HOPE), which envisions sending a crew to the moon Callisto to conduct exploration and sample return activities. To realize such a mission, the spacecraft will be the most complex interplanetary vehicle ever built, representing the best technical efforts of several nations. A wealth of new technologies will need to be developed, including new propulsion systems, hibernation strategies, and revolutionary radiation shielding materials. Step by step, the book will describe how the mission architecture will evolve, how crews will be selected and trained, and what the mission will entail from launch to landing. However, the focus of "Interplanetary Outpost" is on the human element. The extended duration, logistical challenges, radiation concerns, communication lag times, isolation, and deleterious effects on the human body will conspire to not only significantly impair human performance but also affect the behavior of crewmembers. This book addresses each of these issues in detail while still providing the reader with a background to the necessary elements comprising such a mission.

The Story of Psychology - Morton Hunt 2009-09-16

Socrates, Plato, Descartes, Spinoza, Mesmer, William James, Pavlov, Freud, Piaget, Erikson, and Skinner. Each of these thinkers recognized that human beings could examine, comprehend, and eventually guide or influence their own thought processes, emotions, and resulting behavior. The lives and accomplishments of these pillars of psychology, expertly assembled by Morton Hunt, are set against the times in which the subjects lived. Hunt skillfully presents dramatic and lucid accounts of the techniques and validity of centuries of psychological research, and of the methods and effectiveness of major forms of psychotherapy. Fully revised, and incorporating the dramatic developments of the last fifteen years, The Story of Psychology is a graceful and absorbing chronicle of one of the great human inquiries—the search for the

true causes of our behavior.
