The Rating Agencies and Their Credit Ratings - Herwig

Langohr 2010-04-01

Credit rating agencies play a critical role in capital markets, guiding the asset allocation of institutional investors as private capital moves freely around the world in search of the best trade-off between risk and return. However, they have also been strongly criticised for failing to spot the Asian crisis in the early 1990s, the Enron, WorldCom and Parmalat collapses in the early 2000s and finally for their ratings of subprime-related structured

finance instruments and their role in the current financial crisis. This book is a guide to ratings, the ratings industry and the mechanics and economics of obtaining a rating. It sheds light on the role that the agencies play in the international financial markets. It avoids the sensationalist approach often associated with studies of rating scandals and the financial crisis, and instead provides an objective and critical analysis of the business of ratings. The book will be of practical use to any individual

who has to deal with ratings and the ratings industry in their day-to-day job. Reviews "Rating agencies fulfil an important role in the capital markets, but given their power, they are frequently the object of criticism. Some of it is justified but most of it portrays a lack of understanding of their business. In their book *The Rating Agencies and their Credit Ratings*, Herwig and Patricia Langohr provide an excellent economic background to the role of rating agencies and also a thorough understanding of their business and the problems they face. I recommend this book to all those who have an interest in this somewhat arcane but extremely important area." - Robin Monro-Davies, Former CEO, Fitch Ratings. "At a time of unprecedented public and political scrutiny of the effectiveness and indeed the basic business model of the Credit Rating industry, and heightened concerns regarding the transparency and accountability of the leading agencies, this book provides a

commendably comprehensive overview, and should provide invaluable assistance in the ongoing debate." -Rupert Atkinson, Managing Director, Head of Credit Advisory Group, Morgan Stanley and member of the SIFMA Rating Agency Task Force "The Langohrs have provided useful information in a field where one frequently finds only opinions or misconceptions. They supply a firm base from which to understand changes now underway. A well-read copy of this monograph should be close to the desk of every investor, issuer and financial regulator, legislator or commentator." - John Grout, Policy and Technical Director, The Association of Corporate Treasurers

Technological
Entrepreneurship - Donald S.
Siegel 2006

The aim of this authoritative selection is to synthesize the burgeoning, heterogeneous literature on institutions and agents engaged in technological entrepreneurship at universities. These studies highlight the importance of institutional incentives and organizational practices in stimulating entrepreneurship, and clearly demonstrate the multiplicity of stakeholder objectives, perceptions and outcomes relating to it. However the evidence is much less clear on the effectiveness of property-based institutions designed to promote technological entrepreneurship, such as science parks and incubators. The volume covers four related topics: university licensing and patenting; science parks and incubators; university-based start ups; and the role of academic science in entrepreneurship. Professor Siegel - a leading authority in the field - has written a

scholarly new introduction which summarizes the key findings of these studies and discusses their managerial and policy implications.

The Other 90% - Robert K.

limits to human capacity. Now, although a host of scientific discoveries prove this wrong, a mindset of limits persists, blocking us from our greatest possibilities and leaving us feeling bombarded by stress, change, and uncertainty. No matter how hard we work, no matter how much we give, we're still not getting what we hoped for. There is another way. Dr. Robert Cooper, a neuroscience pioneer and leadership advisor, urges us to take a radically different view of human capacity. We are mostly unused potential, he says, employing less than 10 percent of our brilliance or hidden talents. In easy-to-follow steps, he explains how to develop and apply the art and science of your hidden capacity. The art is the motivation and inspiration coming from the wonderful stories that are the heart of The Other 90%. Dr. Cooper draws on his wide-ranging insights and experiences to show how it's possible to make a difference in yourself and others. However, inspiration

without a way to turn vision into reality is an empty vessel. Combining art with science, Dr. Cooper provides extraordinary help in the form of specific, little-known practical ways to use the latest research in neuroscience, performance psychology, and work physiology for excelling in a pressure-filled world. He shows you how to: * Increase energy at work -- and have more energy for personal and family life. * Activate the brain's "alertness switches" to defeat pressure and stress. * Use not only the brain in your head but the ones in your heart and gut. * Motivate exceptional ingenuity and performance in yourself and others. The most exciting breakthroughs will not come from advances in technology but from a deeper realization of what it means to be most human and alive. Many of the choices that can dramatically change our lives are simple and practical -- yet few people know what these choices are or how to apply them in work and life. The Other 90% is your guide to new

territory and new challenges.

Online Teaching and Learning in Higher Education - Pedro Isaias
2021-10-01

This book is to explores a variety of facets of online learning environments to understand how learning occurs and succeeds in digital contexts and what teaching strategies and technologies are most suited to this format.

Business, health, government and education are some of the core sectors of society which have been experiencing deep transformations due to a generalized digitalization. While these changes are not novel, the swift progress of technology and the rising complexity of digital environments place a focus on

the need for further research and novel strategies. In the context of education, the promise of increased flexibility and broader access to educational resources is impelling much of higher education's course offerings to online environments. The 21st century learner requires an education that can be pursued anytime and anywhere and that is more aligned with the demands of a digital society. Online education not only assists students to successfully integrate a workforce that is increasingly digital, but it helps them to become more comfortable with the use of technology in general and, hence, more prepared to be prolific digital citizens. The variety of settings portrayed in this volume attest to the unlimited opportunities afforded by online learning and serve as valuable evidence of its benefit for students' educational experience. Moreover, these research efforts assist a more comprehensive reflection about the delivery of higher

education in the context of online settings.

language: English, abstract:
Companies all over the world
need liquid assets to start,

grow or save their businesses.
There are several options for
companies to get access to
these assets, such as the
classical use of revenues or to
raise a credit at a bank. But
these options are maybe not
sufficient enough or limited in
time. To reach their goals
companies can raise the funds
in the capital market through
an initial public offering. Due
to the advancing globalization
and digitalization companies
theoretically can gather money
through the IPO from all over

considered to be one of the
most significant events in the
life cycle of companies a
profound analysis of the
advantages and disadvantages
of IPOs is needed to be
conducted by the companies.
