Which Way? - Lidia Stanton 2017-07-07

For page samples, follow the link:

<https://books.lidiastanton.com/whichway> This colourful and highly engaging resource is written for children as young as 4-5 years old but also those in Key Stage 2 of primary school (up to 9 years old) who continue to feel confused by letter and digit shapes. The latter group might become so discouraged that they avoid writing, or write very little, despite having great imaginations. They start doubting their ability to simply 'know' the correct way when writing b/d, p/q, p/g, 9/g, 6/9, s/z, 5/S, S/3, etc. Most teachers and parents are very good at playing down the reversals and encouraging the child to have another go. They say, "It's fine, it's still good writing. I love what you've written here." Yet, after so many attempts and after so many teacher corrections on the page, the child begins to think, "This writing game might not be for me after all". Those with dyslexia will have additional phonological difficulties to manage alongside poor memory for graphic shapes. This workbook is for children who can trace well at speed, thus appear to have developed adequate

motor memory in their fingers, yet struggle to remember 'which way' to write the letter or digit. It is very likely that they will be ready to integrate this type of linear visual-spatial information at a later time. For now, they have no real-life representation, or model, of a handful of graphic shapes in their brains, and this, in turn, can affect their confidence in writing independently. This resource offers practical and long-term 'tricks' that will trigger the child's memory at the right moment. It adopts a complementary approach to traditional letter formation teaching to bridge the gap between children who are proficient graphic writers and those whose brains make different sense of graphic information. Many children with dyslexia and dysgraphia will particularly benefit from completing the workbook. How to use the resource The child doesn't need to work through the entire book. Choose sections that are relevant to their needs. Younger children (aged 4-6) will almost certainly need assistance when working with the resource, although older ones will no doubt choose to work independently, showing their practised strategies and completed activities to teachers and parents. It is recommended that section 7 (Use your whole body) is attempted with the help of an older helper or adult. There are more than one method to help distinguish between b/d/p and s/z in this workbook. Introduce the child to only one method at a time, evaluate the child's progress, and decide whether there is a need to move on to the next one. Some children are more practical than visual - the 'Use your hands' strategy might be sufficient for them. Other children might enjoy more visual strategies in sections 4, 5 and 6. In my experience, section 7 (Use your whole body) works well with children who need to 'experience' concepts in a multi-sensory manner. Pay attention to the child's initial response to a particular method. It will guide you along. You can mix and match strategies. Some children don't confuse b/d as much but struggle with p/9. Some activities can be completed independently of the section the child is currently working through. For example, Activity 7 can be attempted after completing the 'Use your hands' section. Flick through the book to decide which activities appear to be suitable to the child's

current progress.

Elapsed Time Workbook - Maria Miller

2016-01-15

Elapsed Time Workbook contains lessons and exercises suitable for grades 3 and 4. The first lesson, "How Many Hours Pass", uses a number-line diagram to help students figure out how many complete hours pass from one given time to the other, including if there is a change from AM to PM. The lesson "How Many Minutes Pass?" encourages students to use a practice (analog) clock or visualize the minute hand moving along the clock face to figure out the elapsed time. It also explains the subtraction method for easy time intervals. The next two lessons about calculating elapsed time emphasize dividing a time interval into parts that are easily calculated. For example, to find the elapsed time from 10:30 AM to 7:00 PM, the student learns to find the elapsed time from 10:30 AM to 12:00 noon, and then from 12:00 noon to 7 PM. The same principle is followed when the time-interval seems more complex. Lastly, the lesson "Elapsed Time or How Much Time Passes", introduces the concept of adding or subtracting hours and minutes vertically in columns.

Humble Math - 100 Days of Money, Fractions, & Telling the Time: Workbook (With Answer Key): Ages 6-11 - Count Money (Counting United States Coins and - Humble Math 2020-09-02
100 days of practice counting money, learning fractions, and telling the time. Three core areas of math that students often need additional help to master. Start by counting groups of coins that have a value of a dollar or less. Slowly learn to count greater amounts of money that include small and large bills too. Add and subtract values, and even learn to make change. Learn fractions one step at a time. Start with simple fractions and eventually learn to add and subtract mixed numbers. Telling the time is one of the more difficult concepts for children to learn. Gradually progress from learning to tell hours, to quarter hours. Eventually tell time in five minute and minute increments. This is a great workbook to start out with. Most students will grasp the concepts within each of the three sections. If a student still needs more practice, Humble Math has workbooks that provide additional practice for these concepts too.

[The Basketball Chronicles of Mister Jennings](#) - Keith Jennings 2016-03-16

My story is different, but I'm sure every small player that wanted to become a professional basketball player can relate to what I had to go through. I'm 5'7" and there are so many small

basketball players that get overlooked because of their size. I want to be the voice for those players. I was blessed by God with the talent and love to be a basketball player. Through God's grace and timing, basketball has shown me parts of the world that I would've never visited and the great support that I received from my family and friends will never be forgotten or taken for granted...dream big, work for it and see what happens! Growing up in the Jennings' household during basketball season was something I loved and respected. Basketball in the morning, basketball in the evening, basketball at night, basketball in the house, basketball in the gyms, basketball at the dunk courts, basketball on television, basketball movies, basketball without a basketball, I just couldn't get enough and then it turned into a memory bank. Memories of family basketball, memories of high school basketball, memories of college basketball, memories of the NBA, memories of European basketball, memories of good games, bad games, great games, and injuries. If the good outweighs the bad you'll be happy to share your story with anyone that asks. You have to understand that a lot of people never gave me a chance. My family believed in me and I believed in myself, and I worked so hard I get chills just thinking about it. The memories don't stop until you stop. I found out very quickly that short basketball players need to be special. Looking back on it, I realized that the short players that I liked were special. Mugsy Boges was 5'3," Spud Webb was 5'7" and could dunk (he won the NBA dunk contest back in the day), Calvin Murphy was a flat out scorer, and the list goes on and on. At this present time there are only 10 basketball players under 6' that have played 3 years or more in the NBA. I felt like I was special because I played basketball on all major levels: high school, college, NBA and European professional basketball. I'm going to take you through a series of events that I believe gave me the opportunity to not only have my basketball dreams come true, but to also be able to make money doing something I love. Have you ever been to a place where you feel at peace with yourself? If you haven't, I hope you find it before your time on this earth is done. My peace is basketball. It doesn't matter what is going on in my life, I can grab a basketball, find a rim and

the rim doesn't even have to have nets. I'll forget everything and just play. It's a great feeling. I believe dreams come true. Mine did and yours can too. You just need to be patient, work hard, don't listen to the negative people (haters), and believe in your own abilities. I did. I had to deal with all of those things and it shaped me to be the man that I am today.
