Bmw 3 - Still the Ultimate Driving Machine - William Frangipane
2017-10-29

This is the third and last book of a series on the BMW 3-series. It is car that defines the sport sedan. This book covers the fifth and sixth generations of cars, the E90 and F30. Both generations are very controversial. With the E90, thanks to the chief designer, Chris Bangle, there were boldly aggressive changes to the iconic design. The iDrive interactive system confused many a driver. Even the supercar, the M3, had a V8 engine, which for many folks was like putting a moustache on the Mona Lisa. Despite all of this, the 3-series grew and grew in popularity. Plus, the magic drivability of the car remained in its DNA. For the present F30 generation, BMW split the 3-series right down the middle. The everyman's cars, the sedan and wagon remained with the 3-series. The coupe and convertible, now part of the new 4-series, are closer to the roots of the brand. BMW tries to conquer all the small luxury car market with new unusual models and engines, unthought-of until very recently. As the car world awaits the seventh generation of cars, here is a review of the most review ones.

The Negotiator - Ben Lopez 2012-09-01

Ben Lopez spends his life traveling the world, bartering with people who

value money over life. Working for governments, law enforcement agencies, multinational corporations and private clients, Ben is an expert K&R (Kidnap and Ransom) consultant, supplying professional kidnap-negotiation services. He can be called out to anywhere in the world within twenty-four-hour notice to set up and command the negotiator's cell, bargaining with religious fanatics, hardened criminals, and other desperate people in order to save the lives of their captives. Alongside a shadowy team of former spies and special operatives, his arsenal of psychological techniques is just as powerful as brute force. He'll spend as long as is necessary to get the job done. And then he'll disappear. This extraordinary book reads like a thriller—but for those involved in the stories within it, the drama and the tension are very real.

Automotive Ergonomics - Heiner Bubb 2021-10-19

Ergonomics teaches how to design technology in such a way that it is optimally adapted to the needs, wishes and characteristics of the user. In this context, the concept of the human-machine system has become established. In a systematic way and with a detailed view of the complicated technical and perceptual psychological and methodological connections, this book explains the basics of automotive ergonomics with numerous examples. The application is shown in examples such as package, design of displays and control elements, of environmental ergonomics such as lighting, sound, vibrations, climate and smell. The design of driver assistance systems from an ergonomic perspective is also a central topic. The book is rounded off by methods of ergonomic vehicle development, the use of mock-ups, driving simulators and tests in real vehicles and prototypes. For the first time, those responsible in the automotive industry and in the field of relevant research are provided with a specialized systematic work that provides the ergonomic findings in the design of today's automobiles. This provides planners and designers of today's automobiles with concrete information for ergonomic product development, enabling them to keep an eye on decisive requirements and subsequent customer acceptance. This book is a translation of the original German 1st edition *Automobilergonomie* by Heiner Bubb, Klaus Bengler, Rainer E. Grünen & Mark Vollrath, published by Springer Fachmedien Wiesbaden GmbH, part of Springer Nature in 2015. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). Automotive FDI in Emerging Europe - A. J. Jacobs 2017-06-19

This book examines the dramatic increase in automotive assembly plants in the former Socialist Central European (CE) nations of Czechia, East Germany, Hungary, Poland, and Slovakia from 1989 onwards. Enticed by relatively lower-wage labour and significant government incentives, the world's largest automakers have launched more than 20 passenger car assembly complexes in CE nations, with production accelerating dramatically since 2001. As a result, the annual passenger car production in Western Europe declined by more than 20% between 2001 and 2015, and alternatively in the CEE it increased by nearly 170% during this period. Drawing on case studies of 25 current and former foreign-run assembly plants, the author presents a rare historical account of automotive foreign assembly plants in the CE following this dramatic geographic shift. This book will expand the knowledge of policy-makers in Europe in relation to their pursuits of FDI and will be of great interest to scholars and students of business, economic history, political science, and development.
