The Trotula - Trotula 2001-04-16

The Trotula was the most influential compendium on women's medicine in medieval Europe. Scholarly debate has long focused on the traditional attribution of the work to the mysterious Trotula, said to have been the first female professor of medicine in eleventh- or twelfth-century Salerno, just south of Naples, then the leading center of medical learning in Europe. Yet as Monica H. Green reveals in her introduction to this first edition of the Latin text since the sixteenth century, and the first English translation of the book ever based upon a medieval form of the text, the Trotula is not a single treatise but an ensemble of three independent works, each by a different author. To varying degrees, these three works reflect the synthesis of indigenous practices of southern Italians with the new theories, practices, and medicinal substances coming out of the Arabic world. Arguing that these texts can be understood only within the intellectual and social context that produced them, Green analyzes them against the background of historical gynecological literature as well as current knowledge about women's lives in twelfth-century southern Italy. She examines the history and composition of the three works and introduces the reader to the medical culture of medieval Salerno from which they emerged. Among her findings is that the second of the three texts, "On the Treatments for Women," does derive from the work of a Salernitan woman healer named Trota. However, the other two texts—"On the Conditions of Women" and "On Women's Cosmetics"—are probably of male authorship, a fact indicating the complex gender relations surrounding the production and use of knowledge about the female body. Through an exhaustive study of the extant manuscripts of the Trotula, Green presents a critical edition of the so-called standardized Trotula ensemble, a composite form of the texts that was produced in the mid-thirteenth century and circulated widely in learned circles. The facing-page complete English translation makes the work accessible to a broad audience of readers interested in medieval history, women's studies, and premodern systems of medical thought and practice.

Advanced Practice in Endocrinology Nursing - Sofia Llahana 2019-02-26

This book provides a comprehensive guide for nurses practicing in any area of endocrinology and at any level of expertise. Endocrinology Nursing is a fast-developing specialty with nurses performing advanced roles and expanding their practice to run independent nurse-led services. Supported by the European Society of Endocrinology (ESE) and edited by members of the ESE Nurses Working Group, this is the first book ever published specifically for endocrine nurses. It is also an excellent resource for endocrinology specialty trainees, general practitioners, medical and nursing students, expert patients and nurses working in specialties such as fertility, osteoporosis, oncology, obesity, urology and gynaecology, who look after patients with endocrine-related disorders. This volume includes 13 sections and 69 chapters providing a comprehensive overview of adult and paediatric endocrinology but also a section on advanced practice, role development and nursing research. It has been written by an international team of more than 100 eminent nurses, physicians, surgeons, psychologists and other healthcare professionals, which makes this book a valuable resource for any multidisciplinary team. Many patient advocacy groups have contributed with case studies which emphasises the close working relationships with patients.

Nuclear Science Abstracts - 1956

NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948 through 1976, pre-dating the prestigious INIS database, which began in 1970. NSA existed as a printed product (Volumes 1-33) initially, created by DOE's predecessor, the U.S. Atomic Energy Commission (AEC). NSA includes citations to scientific and technical reports from the AEC, the U.S. Energy Research and Development Administration and its contractors, plus other agencies and international organizations, universities, and industrial and research organizations. References to books, conference proceedings, papers, patents, dissertations, engineering drawings, and journal articles from worldwide sources are also included. Abstracts and full text are provided if available.

Integration of Refugee Students in European Higher Education Comparative Country Cases - Ayselin YILDIZ 2019-03-04

The book provides an overview and descriptive analysis of how selected countries - Germany, the Netherlands, Spain, Norway, UK and Turkey- have responded to the massive inflow of refugees, as well as the policy practices they have developed concerning refugee students' integration into higher education.

Seeking to encourage sustainable policy responses and national frameworks, this report highlights these selected countries' procedures to ensure access to higher education and also approaches to recognize foreign qualifications. It also examines particular challenges in the case of each country. The report limits its scope exclusively to refugee students, excluding practices developed for refugee academics/university staff. The book offers a contribution to the existing literature on educational policy for refugees and encourages higher education institutions to remember their central role as a driving force for social development and integration.

CNS Neurotransmitters and Neuromodulators - Trevor W. Stone 1996-03-27

As a volume in the series *CNS Neurotransmitters and Neuromodulators*, this text is destined to become a definitive reference. Well-known international authors have contributed up-to-date reviews covering a wide-range of interdisciplinary aspects of neuroactive steroid function. Specifically, this volume includes chapters dealing with the expression and properties of steroid receptors in the central nervous system (CNS); steroid interactions with amino acids, amines, and growth factors; electrophysiology; hypothalamic and feeding control; and the extremely topical issue of steroid influences on sexual differentiation of the brain. *Neuroactive Steroids* is an indispensable reference work for any researcher involved with steroids in the CNS, particularly in the areas of physiology, anatomy, neuropharmacology, neurochemistry, psychiatry, and molecular biology. In addition, it provides the perfect one-stop introduction for students.

Mathematics Assessment and Evaluation - Thomas A. Romberg 1992-01-01

Are current testing practices consistent with the goals of the reform movement in school mathematics? If not, what are the alternatives? How can authentic performance in mathematics be assessed? These and similar questions about tests and their uses have forced those advocating change to examine the way in which mathematical performance data is gathered and used in American schools. This book provides recent views on the issues surrounding mathematics tests, such as the need for valid performance data, the implications of the Curriculum and Evaluation Standards for School Mathematics for test development, the identification of valid items and tests in terms of the Standards, the procedures now being used to construct a sample of state assessment tests, gender differences in test taking, and methods of reporting student achievement.

Seed Analysis - Hans-Ferdinand Linskens 2013-11-11

Modern Methods of Plant Analysis When the handbook *Modern Methods of Plant Analysis* was first introduced in 1954 the considerations were: 1. the dependence of scientific progress in biology on the improvement of existing and the introduction of new methods; 2. the difficulty in finding many new analytical methods in specialized journals which are normally not accessible to experimental plant biologists; 3. the fact that in the methods sections of papers the description of methods is frequently so compact, or even sometimes so incomplete that it is difficult to reproduce experiments. These considerations still stand today. The series was highly successful, seven volumes appearing between 1956 and 1964. Since there is still today a demand for the old series, the publisher has decided to resume publication of *Modern Methods of Plant Analysis*. It is hoped that the New Series will be just as acceptable to those working in plant sciences and related fields as the early volumes undoubtedly were. It is difficult to single out the major reasons for success of any publication, but we believe that the methods published in the first series were up-to-date at the time and presented in a way that made description, as applied to plant material, complete in itself with little need to consult other publications. Contribution authors have attempted to follow these guidelines in this New Series of volumes.

Network Security Assessment - Chris McNab 2004

A practical handbook for network administrators who need to develop and implement security assessment programs, exploring a variety of offensive technologies, explaining how to design and deploy networks that are immune to offensive tools and scripts, and detailing an efficient testing model. Original. (Intermediate) Central Regulation of the Endocrine System - K. Fuxe 2013-03-08

According to the classical concept of Geoffrey Harris the pituitary gland is controlled by the brain by means of blood-borne chemical messengers produced by central neurons. The recent isolation and structural characterization of several such messengers by Roger Guillemin and Andrew Schally and their collaborators brought the final proof for this hypothesis. This also meant that the extensive knowledge collected in the field of neurobiology now became highly relevant for the endocrinologists. For this reason it was felt important to organize a symposium which brought together experts in the fields of neurobiology and endocrinology. The idea was to focus the attention on neuronal mechanisms, particularly those related to chemical transmission, which may be of importance for the central regulation of hormonal secretion patterns. We would like to express our sincere gratitude to the Nobel Foundation for supporting the organization of the Nobel Symposium 42 on "Principles of the Central Regulation of the Endocrine System". We would also like to express our thanks to all participants, to Professor Carl-Gustaf Bernhard, Permanent Secretary of the Royal Academy of Sciences, for making the facilities of the Academ- available to us, and to the Symposium secretaries Mrs. Gun Hultgren, Mrs. Lena Persson and Mrs. Ulla-Britt Wedin. It is a pleasure to acknowledge the generous financial support from the Nobel Foundation and its Nobel Symposium Committee through grants from the Tercentenary Foundation of the Bank of Sweden, and from the Swedish Medical Research Council, KABI AB, Stockholm, and ASTRA AB, Sodertalje.
