**When Flying Was Fun!** - Bill Eads 2007-01-15

When Flying Was Fun! is an autobiographical collection of aviation anecdotes covering four decades of flying, starting with the sixties. These humorous and sometimes poignant stories are told from a first person perspective by the author, who was a Naval Aviator during the Vietnam War and spent over thirty years as an airline pilot with United Airlines. These memoirs relate to those days when pilots actually flew airplanes,

before the days of "glass cockpits" and computer-operated flights. Those were the days when passengers dressed up in their Sunday finest for a trip to the airport to go on a flight that would take them on the adventure of their lives! This was a time when airline pilots and flight attendants looked and felt sharp as they strode to their airplanes with pride in their uniforms and the feeling that they truly were part of the most glamorous profession in America.

**Scapegoat** - Emilio Corsetti III 2016-08-01

On April 4, 1979, a Boeing 727 with 82 passengers and a crew of 7 rolled over and plummeted from an altitude of 39,000 feet to within seconds of crashing were it not for the crew's actions to save the plane. The cause of the unexplained dive was the subject of one of the longest NTSB investigations at that time. While the crew's efforts to save TWA 841 were initially hailed as heroic, that all changed when safety inspectors found twenty-one minutes of the thirty-minute cockpit voice recorder tape blank. The captain of the flight, Harvey "Hoot" Gibson, subsequently came under suspicion for deliberately erasing the tape in an effort to hide incriminating evidence. The voice recorder was never evaluated for any deficiencies. From that moment on, the investigation was focused on the crew to the exclusion of all other evidence. It was an investigation based on rumors, innuendos, and speculation. Eventually the NTSB, despite sworn testimony to the contrary, blamed the crew for the incident by having improperly manipulated the controls; leading to the dive. This is the story of a NTSB investigation gone awry and one pilot's decade-long battle to clear his name.

**AIR CRASH INVESTIGATIONS, GROSS NEGLIGENCE KILLS 151, The Crash of Union des Transports Aeriens de Guinee Flight GHI 141** - George Cramoisi, editor 2012-08-01

On 25 December 2003, Union des Transport A riens de Guin e Flight GIH 141, a Boeing 727-223, on a flight from Conakry (Guinea) to Kufra (Libya), Beirut (Lebanon) and Dubai (United Arab Emirates) stopped over at Cotonou, Republic of Benin. During takeoff the overloaded airplane, was not able to climb properly and struck an airport building on the extended runway centerline, and crashed onto the beach and ended up in the ocean, killing 151 of the 163 people on board. The cause of the accident was the difficulty for the flight crew to rotate with an overloaded airplane with an unknown center of gravity. This in combination with the facts that the operator of the airline lacked any competence regarding organization and regulatory documentation, which made it impossible to correctly load and check the loading of the airplane, and the inadequacy of the supervision exercised by the Guinean civil aviation authorities in the context of safety oversight.

**The Crash of Piedmont Airlines Flight 22** - Paul D. Houle 2015-12-22

Against a backdrop of inadequate funding, misplaced priorities and a lack of manpower, American commercial aviation in the 1960s was in a perilous state. In July 1967, when a Piedmont Airlines Boeing 727 collided with a Cessna 310 over Hendersonville, North Carolina, killing 82 people, the industry was in crisis. Congress called hearings on aviation safety and government and union officials pressured President Lyndon Johnson to request increased funding for aviation safety. But the National Transportation Safety Board's probe into the crash was flawed from the start. The investigative team was made up of individuals whose companies had certain interests in the outcome. The lead investigator was the brother of the vice president of Piedmont Airlines. In an effort to shift blame from the government and Piedmont, critical conversations recorded on tape never made it into the NTSB's report. Maintenance and training records, as well as industry warnings of the 727's operational limitations, were also omitted. This book reveals the true story of the investigation: what was left out and why.

*Flying Blind* - Peter Robison 2021-11-30

NEW YORK TIMES BUSINESS BESTSELLER • A suspenseful behind-the-scenes look at the dysfunction that contributed to one of the worst tragedies in modern aviation: the 2018 and 2019 crashes of the Boeing 737 MAX. An "authoritative, gripping and finely detailed narrative that charts the decline of one of the great American companies" (New York Times Book Review), from the award-winning reporter for Bloomberg. Boeing is a century-old titan of industry. It played a major role in the early days of commercial flight, World War II bombing missions, and moon landings. The planemaker remains a cornerstone of the U.S. economy, as well as a linchpin in the awesome routine of modern air travel. But in 2018 and 2019, two crashes of the Boeing 737 MAX 8 killed 346 people. The crashes exposed a shocking pattern of malfeasance, leading to the biggest crisis in the company's history—and one of the costliest corporate scandals ever. How did things go so horribly wrong at Boeing? *Flying Blind* is the definitive exposé of the disasters that transfixed the world. Drawing from exclusive interviews with current and former employees of Boeing and the FAA; industry executives and analysts; and family members of the victims, it reveals how a broken corporate culture paved the way for catastrophe. It shows how in the race to beat the competition and reward top executives, Boeing skimped on testing, pressured employees to meet unrealistic deadlines, and convinced regulators to put planes into service without properly equipping them or their pilots for flight. It examines how the company, once a treasured American innovator, became obsessed with the bottom line, putting shareholders over customers, employees, and communities. By Bloomberg investigative journalist Peter Robison, who covered Boeing as a beat reporter during the company's fateful merger with McDonnell Douglas in the late '90s, this is the story of a business gone wildly off course. At once riveting and disturbing, it shows how an iconic company fell prey to a win-at-all-costs mentality, threatening an industry and endangering countless lives.

**Aviation Disasters** - David Gero 2009-05-29

Flying as an airline passenger is, statistically, one of the safest forms of travel. Even so, the history of civil aviation is littered with high-profile disasters involving major loss of life. This new edition of the authoritative work on the subject brings the grim but important story of air disasters right up to date. David Gero assembles a list of major air disasters since the 1950s across continents. He investigates every type of calamity, including those caused by appalling weather, mechanical failure, pilot error, inhospitable terrain and hostile action. The first incident of sabotage involving a commercial jetliner is covered, as is the first, much-feared crash of the jumbo jet era. Examined alongside less well-known disasters are high-profile episodes such as that of Pan American Flight 103 at Lockerbie in 1988, the Twin Towers tragedy of 11 September 2001 and, more recently, the disappearance of Malaysia Airlines Flight 370 in 2014 - the greatest mystery of the commercial jet age. *Aviation Disasters* is the authoritative record of air disasters worldwide, fully illustrated with a fascinating selection of photographs.
