**Concepts of Biology** - Samantha Fowler 2018-01-07

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Nervous System - Dr. Tommy Mitchell 2017-09-05

Come explore this in-depth examination of the body's master control mechanism, the nervous system! The third volume of the Wonders of the Human Body series is the next step in our journey though the most amazing thing in the universe, the human body. Our nervous system must process vast amounts of information each second, information that comes from all parts of the body. Then nerve signals are sent out in response to those inputs. If this sounds simple, rest assured, it is not. It is all quite extraordinary! But as with all things in our fallen cursed world, things do go wrong. We will also explore the problems that occur when the nervous system is damaged by disease or injury. In *The Nervous System*, you will learn about: How nerve signals are generated throughout the body How these nerve signals are transmitted to and from the brain The structure of the brain and how it processes input from the body Our senses: sight, hearing, taste, and more When you see the incredible complexity of the nervous system, you will realize that our bodies cannot be the result of chemical accidents occurring over millions of years. The human body is the greatest creation of an all-knowing Master Designer!
