A Guide to the Project Management Body of Knowledge (PMBOK® Guide) provides generalized project management guidance applicable to most projects most of the time. In order to apply this generalized guidance to construction projects, the Project Management Institute has developed the Construction Extension to the PMBOK® Guide. This Construction Extension provides construction-specific guidance for the project management practitioner for each of the PMBOK® Guide Knowledge Areas, as well as guidance in these additional areas not found in the PMBOK® Guide: •All project resources, rather than just human resources •Project health, safety, security, and environmental management •Project financial management, in addition to cost •Management of claims in construction This edition of the Construction Extension also follows a new structure, discussing the principles in each of the Knowledge Areas rather than discussing the individual processes. This approach broadens the applicability of the Construction Extension by increasing the focus on the “what” and “why” of construction project management. This Construction Extension also includes discussion of emerging trends and developments in the construction industry that affect the application of project management to construction projects.

OPM helps organizations deliver value through the following principles: •Aligning strategy •Consistent execution and delivery •Cross-functional collaboration •Adding value to the organization •Continuous training Although useful for any organization that is seeking to better meet its strategic objectives, this standard is particularly beneficial for organizations that do not have a unified project management approach.

The theory, practice, and example projects of international project management A Singaporean corporation builds a manufacturing facility in Cambodia, with a Chinese partner, a Cambodian government agency, and value chain organizations in Germany, Morocco, Vietnam, and Brazil. A Russian charity operates in the Balkans and the Persian Gulf. Pharmaceuticals and food come from ten different countries, physicians are from the EU and Russia, and donations are from Central Asia and the subcontinent. A transnational organization markets through divisions in eighty-two countries. The products are designed in Italy, Sweden, and France, with customization done in each respective country. International projects involve a complex network of cultures, politics, laws, languages, and resources that goes beyond the traditional training and experience of most project managers. International Project Management examines the different dimensions and responsibilities of international projects, and outlines what a project manager must know to lead global projects successfully. It also provides guidelines and examples for the international project management processes.
