**Henna Sourcebook** - Mary Packard 2012-10-01

No one knows for sure when henna was first used for skin decorating, but traces of henna have been found on mummies in Egypt and on cave painting in India dating back thousands of years. While this tradition is still widely used in India, Africa, the Middle East, and Asia, it is now gaining popularity throughout the Western world as well. Rooted in the belief that those whose skin is adorned with henna are blessed with good fortune, henna is often associated with rights of passage—coming of age, marriage, and childbirth. Holidays and festivals are times when women and girls decorate their hands and feet, and henna patterns are sometimes unique to these occasions. In some cultures, a bridegroom may be decorated the night before a wedding as well. It is increasingly common for henna parties to be held in the United States, sometimes at weddings, birthday parties, and baby showers—and sometimes just for fun. Henna patterns are seen adorning pop icons like Madonna, Demi Moore, and Prince, and henna artists are becoming an increasingly common sight at street fairs and shops as a temporary and painless alternative to tattoos. Design motifs are included from many different cultures, with background information provided about the symbolism of the designs and motifs.

**Nurturing a Healthy Mind** - Michael C. Nagel 2012-08-01

The 90's was declared the "Decade of the Brain" and a flurry of research on brain development soon followed. The result: two decades on we now know more about the brain than we did since the first recorded writings 6000 years ago. Advances in technology and science have taught us a great deal and 'Nurturing a Healthy Mind' supports the growing consensus that research on brain development is relevant to parenting. At the beginning of the twenty-first century, parents and teachers are seeing the benefits of this research, with child rearing and education

being shaped by new understandings of the human brain. It is becoming wider knowledge that the interactions between our genetic makeup, early experiences and environmental influences shape the architecture of the developing brain. And as such our understanding of the importance of the early years of life have, thankfully, received much greater attention and scrutiny. We are witnessing a tsunami of research, in conjunction with well-informed individuals, looking to ensure that all children receive the attention they need in their earliest days of life.

'Nurturing a Healthy Mind', with its easy-to-understand format, gives parents and early caregivers a great opportunity to tap into this research and provide the best environment possible for healthy child development.
