### **Science Teaching Essentials**

- Cynthia J. Brame 2019-02-06  
Science Teaching Essentials: Short Guides to Good Practice serves as a reference manual for science faculty as they set up a new course, consider how to teach the course, figure out how to assess their students fairly and efficiently, and review and revise course materials. This book consists of a series of short chapters that instructors can use as resources to address common teaching problems and adopt evidence-based pedagogies. By providing individual chapters that can be used independently as needed, this book provides faculty with a just-in-time teaching resource they can use to draft a new syllabus. This is a must-have resource for science, health science and engineering faculty, as well as graduate students and post-docs preparing for future faculty careers. Provides easily digested, practical, research-based information on how to teach Allows faculty to

efficiently get up-to-speed on a given pedagogy or assessment method Addresses the full range of faculty experiences as they being to teach for the first time or want to reinvent how they teach

### **Concepts of Biology -**

Samantha Fowler 2018-01-07  
Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of

Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

**Implementation and Critical Assessment of the Flipped Classroom Experience** -

Scheg, Abigail G. 2015-01-31  
In the past decade, traditional classroom teaching models have been transformed in order

to better promote active learning and learner engagement. Implementation and Critical Assessment of the Flipped Classroom Experience seeks to capture the momentum of non-traditional teaching methods and provide a necessary resource for individuals who are interested in taking advantage of this pedagogical endeavor. Using narrative explanations and foundation materials provided by experienced instructors, this premier reference work presents the benefits and challenges of flipped methodology implementation in today's classroom to educators and educational administrators across all disciplines and levels.

The Eyes of the Lion - Cindy Yee Kong 2013-11-14

Cindy Yee Kong was a normal little girl living a normal, everyday life in Hong Kong—until a crippling genetic disease reshaped not only her body but her sense of self. She developed uncontrollable twitching and slurred speech, making even the most mundane daily tasks a challenge. Yee’s childhood was defined by an endless string of appointments, as doctor after doctor tried in vain to help her. Desperate, she and her mother moved to New York in the hope of a new life. There, she faced insurmountable pressure to adapt to a new country, culture, and language. Tragically, in a home still haunted by alcoholism, her life was tainted by physical, mental, emotional, and sexual

abuse. After a horrifying attack left her body and heart shattered, Yee struggled with shame and fear. In 1995, she was finally able to put a name to her condition—dopa-responsive dystonia—and her long path of treatment began. From a young age, Yee felt that the only one she could count on was herself. But then, in the midst of her darkest days, she experienced the miracle of true friend’s compassion and was able to begin the slow crawl out of despair. Determined not to be a victim anymore, she devoted herself to her education, earning her degree in sociology from Stony Brook University. A former social worker, Yee shares her story of pain, fear, and optimism, hoping to inspire others to push through their darkest times, too.

Science of Life: Biology Parent Lesson Plan - 2013-08-01

The Science of Life: Biology Course Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the

sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility.

**Semester 1: Intro to Science**

Have you ever wondered about human fossils, “cave men,” skin color, “ape-men,” or why missing links are still missing? Want to discover when T. Rex was small enough to fit in your hand? Or how old dinosaur fossils are-and how we know the age of these bones? Learn how the Bibles’ world view (not evolution’s) unites evidence from science and history into a solid creation foundation for understanding the origin, history, and destiny of life-including yours! In *Building Blocks in Science*, Gary Parker explores some of the most interesting areas of science: fossils, the errors of evolution, the evidences for creation, all about early man and human origins, dinosaurs, and even “races.” Learn how scientists use evidence in the present, how historians use evidence of the past, and discover the biblical world view, not

evolution, that puts the two together in a credible and scientifically-sound way!

**Semester 2: Life Science Study**

clear biological answers for how science and Scripture fit together to honor the Creator. Have you ever wondered about such captivating topics as genetics, the roll of natural selection, embryonic development, or DNA and the magnificent origins of life? Within *Building Blocks in Life Science* you will discover exceptional insights and clarity to patterns of order in living things, including the promise of healing and new birth in Christ. Study numerous ways to refute the evolutionary worldview that life simply evolved by chance over millions of years. The evolutionary worldview can be found filtered through every topic at every age-level in our society. It has become the overwhelmingly accepted paradigm for the origins of life as taught in all secular institutions. This dynamic education resource helps young people not only learn science from a biblical

perspective, but also helps them know how to defend their faith in the process .

## **Advanced Pre-Med Studies Parent Lesson Plan -**

2013-08-01

Advanced Pre-Med Studies Course Description Semester 1: From surgery to vaccines, man has made great strides in the field of medicine. Quality of life has improved dramatically in the last few decades alone, and the future is bright. But students must not forget that God provided humans with minds and resources to bring about these advances. A biblical perspective of healing and the use of medicine provides the best foundation for treating diseases and injury. In *Exploring the History of Medicine*, author John Hudson Tiner reveals the spectacular discoveries that started with men and women who used their abilities to better mankind and give glory to God. The fascinating history of medicine comes alive in this book, providing students with a healthy dose of facts, mini-biographies, and vintage

illustrations. It seems that a new and more terrible disease is touted on the news almost daily. The spread of these scary diseases from bird flu to SARS to AIDS is a cause for concern and leads to questions such as: Where did all these germs come from, and how do they fit into a biblical world view? What kind of function did these microbes have before the Fall? Does antibiotic resistance in bacteria prove evolution? How can something so small have such a huge, deadly impact on the world around us? Professor Alan Gillen sheds light on these and many other questions in *The Genesis of Germs*. He shows how these constantly mutating diseases are proof for devolution rather than evolution and how all of these germs fit into a biblical world view. Dr. Gillen shows how germs are symptomatic of the literal Fall and Curse of creation as a result of man's sin and the hope we have in the coming of Jesus Christ. Semester 2: *Body by Design* defines the basic anatomy and physiology in each of 11 body

systems from a creationist viewpoint. Every chapter explores the wonder, beauty, and creation of the human body, giving evidence for creation, while exposing faulty evolutionist reasoning. Special explorations into each body system look closely at disease aspects, current events, and discoveries, while profiling the classic and contemporary scientists and physicians who have made remarkable breakthroughs in studies of the different areas of the human body. Within Building Blocks in Life Science you will discover exceptional insights and clarity to patterns of order in living things, including the promise of healing and new birth in Christ. Study numerous ways to refute the evolutionary worldview that life simply evolved by chance over millions of years. The evolutionary worldview can be found filtered through every topic at every age-level in our society. It has become the overwhelmingly accepted paradigm for the origins of life as taught in all secular institutions. This

dynamic education resource helps young people not only learn science from a biblical perspective, but also helps them know how to defend their faith in the process.

Semester 2: Biology The field of biology focuses on living things, from the smallest microscopic protozoa to the largest mammal. In this book you will read and explore the life of plants, insects, spiders and other arachnids, life in water, reptiles, birds, and mammals, highlighting God's amazing creation. You will learn about biological classification, how seeds spread around the world, long-term storage of energy, how biologists learned how the stomach digested food, the plant that gave George de Mestral the idea of Velcro, and so much more. For most of

history, biologists used the visible appearance of plants or animals to classify them. They grouped plants or animals with similar-looking features into families. Starting in the 1990's, biologists have extracted DNA and RNA from cells as a guide to how plants or animals should be grouped. Like visual structures, these reveal the underlying design of creation. *Exploring the World of Biology* is a fascinating look at life—from the smallest proteins and spores, to the complex life systems of humans and animals.

**Survey of Science History & Concepts Parent Lesson Plan** - 2013-08-01  
Survey of Science History & Concepts Course Description  
Students will study four areas of science: Scientific Mathematics, Physics, Biology, and Chemistry. Students will gain an appreciation for how each subject has affected our lives, and for the people God

revealed wisdom to as they sought to understand Creation. Each content area is thoroughly explored, giving students a good foundation in each discipline. Semester 1: Math and Physics Numbers surround us. Just try to make it through a day without using any. It's impossible: telephone numbers, calendars, volume settings, shoe sizes, speed limits, weights, street numbers, microwave timers, TV channels, and the list goes on and on. The many advancements and branches of mathematics were developed through the centuries as people encountered problems and relied upon math to solve them. It's amazing how ten simple digits can be used in an endless number of ways to benefit man. The development of these ten digits and their many uses is the fascinating story in Exploring the World of Mathematics. Physics is a branch of science that many people consider to be too complicated to understand. John Hudson Tiner puts this myth to rest as he explains the

fascinating world of physics in a way that students can comprehend. Did you know that a feather and a lump of lead will fall at the same rate in a vacuum? Learn about the history of physics from Aristotle to Galileo to Isaac Newton to the latest advances. Discover how the laws of motion and gravity affect everything from the normal activities of everyday life to launching rockets into space. Learn about the effects of inertia first hand during fun and informative experiments. Exploring the World of Physics is a great tool for student who want to have a deeper understanding of the important and interesting ways that physics affects our lives. Semester 2: Biology and Chemistry The field of biology focuses on living things, from the smallest microscopic protozoa to the largest mammal. In this book you will read and explore the life of plants, insects, spiders and other arachnids, life in water, reptiles, birds, and mammals, highlighting God's amazing

creation. You will learn about biological classification, how seeds spread around the world, long-term storage of energy, how biologists learned how the stomach digested food, the plant that gave George de Mestral the idea of Velcro, and so much more. For most of history, biologists used the visible appearance of plants or animals to classify them. They grouped plants or animals with similar-looking features into families. Starting in the 1990's, biologists have extracted DNA and RNA from cells as a guide to how plants or animals should be grouped. Like visual structures, these reveal the underlying design of creation. Exploring the World of Biology is a fascinating look at life-from the smallest proteins and spores, to the complex life systems of humans and animals. Chemistry is an amazing branch of science that affects us every day, yet few people realize it, or even give it much thought. Without chemistry, there would be nothing made of plastic, there would be no rubber tires, no tin

cans, no televisions, no microwave ovens, or something as simple as wax paper. This book presents an exciting and intriguing tour through the realm of chemistry as each chapter unfolds with facts and stories about the discoveries of discoverers. Find out why pure gold is not used for jewelry or coins. Join Humphry Davy as he made many chemical discoveries, and learn how they shortened his life. See how people in the 1870s could jump over the top of the Washington Monument. Exploring the World of Chemistry brings science to life and is a wonderful learning tool with many illustrations and biographical information.

*College Physics* - Raymond A. Serway 2014-01-01

While physics can seem challenging, its true quality is the sheer simplicity of fundamental physical theories--theories and concepts that can enrich your view of the world around you. COLLEGE PHYSICS, Tenth Edition, provides a clear strategy for connecting those theories to a

consistent problem-solving approach, carefully reinforcing this methodology throughout the text and connecting it to real-world examples. For students planning to take the MCAT exam, the text includes exclusive test prep and review tools to help you prepare. Drawing examples from clinical research, health, and medicine, author Alan E. Kazdin offers detailed coverage of experimental design, assessment, data evaluation and interpretation, case-control and cohort designs, and qualitative research methods. In addition to new pedagogical tools that guide students through the text, the Fifth

Edition offers expanded coverage of key topic areas, such as cultural issues, scientific integrity, and recent changes in the publication and communication of research.

**The Hidden Curriculum—Faculty-Made Tests in Science** - Sheila Tobias

2013-06-29

This resource manual for college-level science instructors reevaluates the role of testing in their curricula and describes innovative techniques pioneered by other teachers. part I examines the effects of the following on lower-division courses: changes in exam content, format, and environment; revisions in grading practices; student response; colleague reaction' the sharing of new practices with other interested professionals, and more. The book includes a comprehensive introduction, faculty-composed narratives, commentaries by well-known science educators, and a visual index to 100 more refined innovations.

**Essential AP Biology** - Princeton Review 2010-12-28

Portable and easy to use, the Princeton Review's Essential AP Biology flashcards bring you important terms and helpful explanations to help turbo-charge your AP test prep. With information naturally broken into bite-sized chunks, our flashcards make it easy to study anytime and anywhere. Essential AP Biology includes 450 flashcards with need-to-know terms for key AP Biology subject areas, covering topics such as: · cells · cellular energetic · photosynthesis · molecular genetics · cell reproduction · heredity · diversity of organisms · plants · animal structure and function · and more Use the color-coded scale on the sides of the box to help measure your progress by keeping track of how many cards you've studied so far, which terms you've mastered, and which you still need to review. Studying for the AP Biology Exam doesn't have to be painful—the Princeton Review's Essential AP Biology flashcards will make it a breeze!

Paleontology Parent Lesson Plan - 2013-08-01

Introduction to Speleology and Paleontology Course

Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility.

Semester 1: Speleology

Explore deep into the hidden wonders beneath the surface as cave expert Dr. Emil Silvestru takes you on an illuminating and educational journey through the mysterious world of caves. Discover the beautiful, thriving ecology, unique animals, and fragile balance of this little-seen ecosystem in caves from around the globe. The Cave Book will teach you about: a creationary model for how caves form, a history of how caves have been used by humans for shelter and worship, how old caves really are, the surprising world of

Neanderthals and their connection to modern humans, how to make a stone axe and about early tools, just how long it really takes for cave formations to form, unusual animals that make caves their home, examples of how connected caves are to mythology of many cultures, the climate and geologic processes and features of caves and karst rocks, the process by which ice caves form, exploration, hazards, and record-setting caves, how caves form, and features above and below the surface. Filled with beautiful and fascinating color photos of caves from around the world. The Cave Book is a wonderful guide to this hidden world of wonderful. Enjoy learning on your journey of exploration into these exciting and mysterious places underground! Semester 2: Paleontology Fossils have fascinated humans for centuries. From the smallest diatoms to the largest dinosaurs, finding a fossil is an exciting and rewarding experience. But where did they

come from, and how long have they been around? These and many other questions are answered in this remarkable book. The Fossil Book will teach you about: the origin of fossils, how to start your own fossil collection, what kinds of fossils can be commonly found, the age of fossils, how scientists find and preserve fossils, how to identify kinds of fossils, how the Flood affected fossil formation, the Geologic Column Diagram, the difference between evolutionists' and creationists' views on fossils, the "four Cs" of biblical creation, the different kinds of rocks fossils are found in, coal and oil formation. Learning about fossils, their origins, and how to collect them can be both fun and educational. The abundance of both marine and land fossils and the locations they are found in is a fascinating subject for students of all ages and has been studied by scientists and layperson alike for many years. *Surviving Chemistry Review Book - 2013 Revision* - Effiong

*Basic Pre-Med Parent Lesson Plan - 2013-08-01*

Basic Pre-Med Course

Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility.

Semester 1: Microbiology As the world waits in fear, world health organizations race to develop a vaccine for the looming bird flu epidemic-a threat that has forced international, federal, and local governments to begin planning for a possible pandemic, and the widespread death and devastation which would follow. Will the world find an answer in time? Or will we see this threat ravage populations as others have before in 1918 with influenza in the late 18th century with yellow fever, or the horrific "black death" or bubonic plague in 1347 AD? "Are these [viruses] examples

of evolution? --Did God make microbes by mistake? Are they accidents of evolution, out of the primordial soup?" These timely questions are examined throughout *The Genesis of Germs*. It seems that a new and more terrible disease is touted on the news almost daily. The spread of these scary diseases from bird flu to SARS to AIDS is a cause for concern and leads to questions such as: Where did all these germs come from, and how do they fit into a biblical world view? What kind of function did these microbes have before the Fall? Does antibiotic resistance in bacteria prove evolution? How can something so small have such a huge, deadly impact on the world around us? Professor Alan Gillen sheds light on these and many other questions in this revealing and detailed book. He shows how these constantly mutating diseases are proof for devolution rather than evolution and how all of these germs fit into a biblical world view. Dr. Gillen shows how germs are symptomatic of the literal Fall and Curse of

creation as a result of man's sin and the hope we have in the coming of Jesus Christ.

Semester 2: Life Science Study clear biological answers for how science and Scripture fit together to honor the Creator.

Have you ever wondered about such captivating topics as genetics, the roll of natural selection, embryonic development, or DNA and the magnificent origins of life?

Within Building Blocks in Life Science you will discover exceptional insights and clarity to patterns of order in living things, including the promise of healing and new birth in Christ. Study numerous ways to refute the evolutionary worldview that life simply evolved by chance over millions of years. The evolutionary worldview can be found filtered through every topic at every age-level in our society. It has become the overwhelmingly accepted paradigm for the origins of life as taught in all secular institutions. This dynamic education resource helps young people not only learn science from a biblical

perspective, but also helps them know how to defend their faith in the process.
