How to Commercialise Research in Biotechnology? - Oliver Uecke 2012-04-21

Biotechnology is considered as a key technology of the 21st century with the potential to offer technological solutions for global health and resource-based problems. Oliver Uecke analyses how early stages of the innovation process in biotechnology can be effectively managed, with the aim to transfer an innovation from academia to industry. A mixed method approach is applied with a multiple case study approach to identify characteristics for effective management and with the method of discrete choice experiments/best-worst scaling to estimate the importance of these characteristics. This study adds to existing research by identifying a group of five important characteristics that should be considered in the early stages of the innovation process, compared to a group of four characteristics that are less important. The results have implications for policy, directors and the management of research institutes and universities, entrepreneurs, TTO manager and other stakeholders involved in technology transfer.

Objective Genetics, Biotechnology, Biochemistry and Forestry - Vijay K. Khanna 2013-12-30

The present book has been designed to serve the students of Plant Breeding, Genetics, Biotechnology, Biochemistry and Forestry. In most of the books, the objective type questions judge the students on the basis of their ability to memorize, because of the way they are formulated. It is important to be able to remember the year of historical events, the scientists involved and who named what to make one remember the landmark contributions of the people on a particular subject. Along with these kinds of questions, majority of the questions in this book have been designed to assess the candidate's understanding of the subject. It is perhaps for the first time where questions have four to six choice statements, which are to be understood to find the right answer. One has to think and remember what he has learnt to be able to answer these questions. There are some books on objective type questions on the subject of Plant Breeding and a very few on Genetics but there is hardly any book, which deals with Tissue Culture, Biotechnology, Biochemistry or Forestry. All these subjects are related as many postgraduate students of Genetics and Plant Breeding take Biotechnology as a minor subject whereas those of Biotechnology take Biochemistry or Genetics and Plant Breeding as a minor subject. Also, undergraduates in agricultural universities study courses on all these subjects including Forestry

The Business of Bioscience - Craig D. Shimasaki 2014-11-29

My journey into this fascinating field of biotechnology started about 26 years ago at a small biotechnology company in South San Francisco called Genentech. I was very fortunate to work for the company that begat the biotech industry during its formative years. This experience established a solid foundation from which I could grow in both the science and business of biotechnology. After my fourth year of working on Oyster Point Boulevard, a close friend and colleague left Genentech to join a start-up biotechnology company. Later, he approached me to leave and join him in of all places - Oklahoma. He persisted for at least a year before I seriously considered his proposal. After listening to their plans, the opportunity suddenly became more and more intriguing. Finally, I took the plunge and joined this entrepreneurial team in cofounding and growing a start-up biotechnology company. Making that fateful decision to leave the security of a larger company was extremely difficult, but it turned out to be the beginning of an entrepreneurial career that

forever changed how I viewed the biotechnology industry. Since that time, I have been fortunate to have cofounded two other biotechnology companies and even participated in taking one of them public. During my career in these start-ups, I held a variety of positions, from directing the science, operations, regulatory, and marketing components, to subsequently becoming CEO.
